

Systems Filtration

Providing Efficient Flushing & Filtration Services

APPLICATIONS

- Fluids Examination (SAE & NAS)
- Commissioning
- Decommissioning
- Control Lines
- Umbilicals
- Flowlines
- Control Panels
- Subsea Trees

EQUIPMENT

- Filtration Units
- Particle Counting

Tools and systems integrity are paramount for functionality assurance. This industry requirement demands both expertise in trained, accomplished personnel and best in class filtration equipment. BlueFin's filtration units are capable of high volume and/or low volume filtration and is designed to mitigate particle contamination.

Equally important, our field technicians are trained and competent on BlueFin's approved process and procedures, which includes particle counting to the industries fluid cleanliness standards such as NAS 1638 and SAE AS4059. From downhole control lines, umbilical's, subsea trees, subsea topside equipment to control panels and compressor stations on land, BlueFin's field leadership are prepared to meet your flushing and filtration needs.
