

Water Treatment & Filtration

Providing Efficient Flushing & Filtration Services

APPLICATIONS

- Pipeline Decommissioning
- Offshore Overboard Produced Water Treatment
- Hydrotest Water Treatment
- ILL Operational Effluent Treatment
- Waster Water Effluent Treatment
- Fluid Handling
- Flowback

EQUIPMENT

- Meets 14C Requirements
- Pipeline Mechanical Filtration Equipment
- Well Testing Mechanical Filtration Equipment
- Acid Stimulation & Completion Flowback Equipment, Incorporation of DGF Technology
- Compliance-Ready Onsite Storage Containment

Environmental accountability and operational safeguards are standard actions demanded by the energy industry. Today's industry-leading operators require expertise that meet such standards, in addition to proactive research and development that enable better practices with zero impact to the environment. BlueFin's Water Treatment and Filtration team combines decades of industry service with educated SMEs to ensure this delivery of compliance and security.

BlueFin maintains the mechanical assets required for the majority of operator's filtration needs. From offshore pipeline abandonments and produced overboard water compliance, to onshore hydrotest watertreatmentandfluidhandling,ourteam understands the full lifecycle approach to these scopes. Our management can fully engineer the proper pre-planning and permitting processes and close of each project in compliance.

Permitting:

- State & Federal
- Post Project Permit Reporting
- Sampling & Recording
- Environmental Consulting Support
