

# T-2 On/Off Tool & Stinger

Zonal Isolation, Tubing Retrieval & Temporary Zone Abandonment

## SOLUTIONS

- Zonal Isolation
- Tubing Retrieval
- Temporary Zone

## SPECIFICATIONS

- On/Off Tool for Casing Sizes 4.5"-7"
- On/Off tool and Stinger for Tubing Sizes 2.375"-3.5"

## ADVANTAGES

- Stinger works with standard blanking plugs, standard blanking plugs, standing valves and regulators
- Wash over shoe cuts through debris

The T-2 On-Off Tool enables the tubing string to be disconnected above a packer for zonal isolation, tubing retrieval, and temporary zone abandonment.

The tool contains an internal lock profile for landing a wireline plug to provide zonal isolation below the packer.

The tool has two basic components, the overshot mounted on the tubing string and the stinger mounted on the packer. The overshot disengages with a standard left release. Shear-up or shear-down positions are compatible with the packer setting and retrieving styles.

The wash over shoe on the overshot cuts through debris. The seals in the tool are retrieved with the overshot to enable redressing at the surface. Available with all common wireline profiles, the stinger works with industry standard blanking plugs, standing valves, and regulators.
